Dear Board

I would like to request that someone from the EAB committee look at a tree on lot 122. A giant cahune palm looks like it's dying. Marco Martinez agrees. I'd like a second opinion please and if it is dying I would like permission to cut it down. Thank you.

The EAB representative(s) will try to get down there to inspect within 48 hours.

Good morning,

The EAB has inspected the Cahune palm tree. The tree still has a lot of green palm fronds at the top with many dead fronds hanging. We recommend that a wire cable be attached to the tree about 2/3 up the tree and tied to another large tree downhill and to the left. This will give the tree time to recover or die.

The cable would prevent the tree from falling on her house or the neighbors house if it does die and fall.

The recommendation at this time is to not allow the tree to be remove.

Dear Board

This is in regard to the cohune palm on lot 122. It looks like it will not recover. More and more leaves are dying. Marco Martinez said it should be chopped because when it does finally fall on its own it will either land on my sister's house or take some other trees down with it. I would like permission to cut the tree

The EAB has discussed this Cahune palm and agree that it should come down.
please let us know when the tree has been removed.
As a reminder, 5 trees must be planted in accordance with the CCR's.
Thank you.
